## **Online Music Function Guide**

# GSC35xx - Online Music Function Guide

## Overview

With the Online music option, the user can stream music on GSC35xx from different music platforms such as Spotify, Soundcloud, and YouTube Music by setting up an HTTP request to an open tab on the browser.

## Configuration

To perform this action, please follow the below steps:

1. Select **Application =>Music =>Playback** and set the audio file to Online Music

*Playback music set up*

2. Once that is selected, Click on the [Start sharing](#) icon

3. After that is selected, a pop-up screen will appear asking you to choose the source from which the music will be played directly to the GSC35xx speaker, the source can be either a Browser tab, a Window, or an Entire screen, we will go through the preview of each example

- **Browser Tab**

### Note

- Make sure "share tab audio" box is checked.
- Supported Browsers are: Chrome (72 and above), Edge (79 and above)

Chrome tab

o Window

Window

o Entire screen

Note

- o Make sure "share system audio" box is checked.

Entire screen

4. You can select the display method convenient to you and click on  to start playing music.

5. Once the Music is being played, you have the possibility to stop the music sharing by clicking the icon .

stop sharing music

This implementation is useful when needing to stream directly from the web or from a local computer client application such as Spotify Desktop, without the need to download and save the audio files locally to the GSC35xx Cloud storage.

**Note**

In order for online music to work, web access mode has to be set to HTTPS, this can be done from the System settings tab under security settings =>Web/SSH Access=>Web Access Mode.

## Supported devices

Model	Supported	Firmware
GSC3505	Yes	1.0.3.3 and above.
GSC3510	Yes	1.0.3.3 and above.
